

## **webKPI Partners with NACIO<sup>2</sup> Systems, Inc**

**San Ramon, CA, April 6, 2009** – webKPI is pleased to announce the successful relocation of its server and IT infrastructure to the NACIO<sup>2</sup> Systems, Inc colocation facility in Novato, California. According to webKPI co-founder Steve Sweeney, “the server transition was completed in a few hours time with no impact on webKPI customers. Having webKPI’s hosted applications running in a secure environment assures the integrity of our web based solutions, while providing the utmost protection for our customer’s financial data.”

NACIO<sup>2</sup> is a premier San Francisco Bay Area data center providing secure managed hosting and colocation facilities for companies, foundations, and government agencies. At NACIO<sup>2</sup> there’s a clear understanding of what it takes to manage the ongoing acceleration of change with infrastructure, delivery, and technical support for crucial online business functions. NACIO<sup>2</sup> datacenters offer an attractive entry point for almost any customer who requires continuous, fault-tolerant operational uptime in their internet and networking systems. According to NACIO<sup>2</sup>’s Travis Long, “*No other data center just 30 minutes from San Francisco’s Embarcadero provides the advantages of space, power, pricing, and customer service like NACIO<sup>2</sup>.*”

webKPI’s growing list of nationwide customers will automatically benefit from the NACIO<sup>2</sup> near-Tier 4 (Uptime Institute rating) infrastructure featuring annual SAS70-Level II certification, 24/7/365 physical security and technical support. In addition, NACIO<sup>2</sup> delivers dual-entry OC-48 fiber to the facility. Coupling the security features of NACIO<sup>2</sup> with webKPI’s data encryption for secure customer data transmission, assures that the protection of webKPI’s client information is at the highest of industry standards.

### **About webKPI**

webKPI is the leading provider of hosted financial Dashboards for the business community. There is no hardware or software to install and clients are up and running in a matter of minutes. The webKPI premise is simplistic in approach and extremely cost effective in application. It provides the ability to share financial information that is all too often locked away within a proprietary accounting system which can only be accessed through a designated gatekeeper/bookkeeper. In today’s world, people who depend on accounting reports to run their business do not have time to wait for paper reports to be generated and delivered in order to make critical business decisions. Today’s business leaders need to see their company’s current financials no matter where they are – in an airport, with their banker, on a conference call or with their investors.

Founded in 2007, webKPI provides solutions that are used by CPA firms, independent CPAs, tax preparers, business coaches and small, medium and large businesses across all industry verticals. More information is available at [www.webkpi.com](http://www.webkpi.com).

### **About NACIO<sup>2</sup> Systems, Inc.**

NACIO<sup>2</sup> Systems is an early thought-leader in the managed hosting and IT services industry. Originally founded in 1994, the company grew rapidly throughout the Web 1.0 era, and in 2001, opened a 36,000 square foot custom designed data center facility located in Novato, CA. Using many internally developed proprietary technologies engineered specifically for the delivery of higher density server environments and systematized standard services while maintaining a lower cost overhead, the result provided economies benefiting customers with value pricing without compromising superior levels of service.

Today’s next generation NACIO<sup>2</sup> carries on this tradition. Our vision is to deliver Internet and network business solutions that extend the reach of information, ideas, and commerce for corporations, foundations and government agencies world-wide. We provide enabling technologies in managed hosting, colocation, IT compliance and professional services to help people better communicate, process data, optimize workflow and increase value.
